

Systiva®

Seed Treatment Fungicide

AUTUMN & SPRING
PROGRAMME IN
WHEAT & BARLEY

Use Systiva to maximise profits

- ✓ Systiva seed treatment delivers the best return on investment in both autumn and spring crops
- ✓ Systiva has enhanced barley yields by over 1500 kg/ha when used as part of a robust fungicide program
- ✓ Systiva promotes strong crop establishment
- ✓ Systiva provides superior control of scald
- ✓ Systiva allows flexibility in the timing of the foliar fungicide applications

We create chemistry

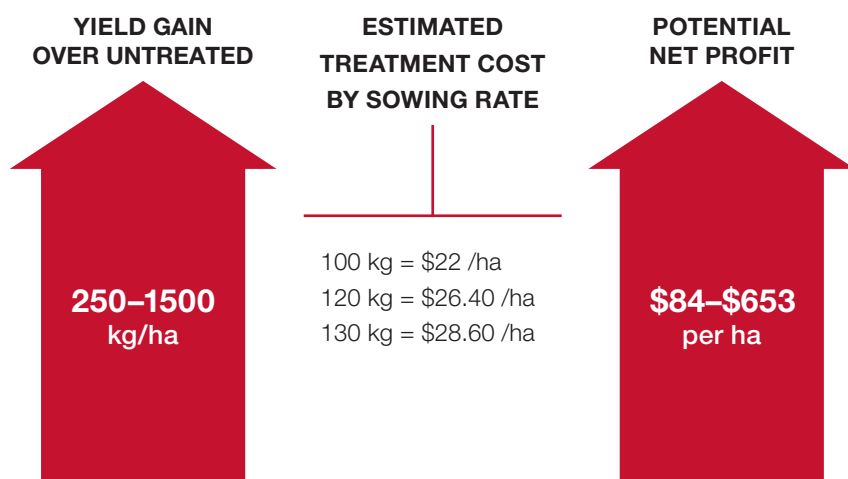

Systiva used in an autumn or spring barley programme

Notes:

1. A T0 application should only be made if there is an identified need for one
2. Applying Comet at T1 targets net blotch. Tank mixing with fungicides from other mode of actions is important for resistance management
3. Revystar® contains a SDHI fungicide and can only be used once after the application of Systiva seed treatment
4. A T3 fungicide application should only be made if there is an identified need for one

Systiva helps set up higher yields and greater profits

These projections are based on years of trial work. They assume a barley price of \$450/tonne and that Systiva is used as part of a robust fungicide program in reasonable growing conditions.

ALWAYS READ AND FOLLOW LABEL DIRECTIONS

This fact sheet is intended as general advice. The information submitted in this publication is based on current BASF knowledge and experience. In view of the many factors that may affect its application, this data does not relieve the user from carrying out their own tests. The data does not imply assurance of certain properties or of suitability for a specific purpose. It is the responsibility of the user to ensure that any proprietary rights and existing laws and legislation are observed. ACVM Registration No's: P008138 (Systiva), P006017 (Comet) & P009654 (Revystar).
